Pregnancy and COVID-19
Frequently asked questions

We understand you have questions about your pregnancy and coronavirus, also called COVID-19. Just discovered in December 2019, we are learning more about COVID-19 every day. With help from the Centers for Disease Control and Prevention, we are providing answers to frequently asked questions to help you understand how to monitor and manage your pregnancy during the coronavirus outbreak. We’ve also included helpful information about Tidelands Health services.

What is the risk to pregnant women of getting COVID-19? Is it easier for pregnant women to become ill with the disease? If they become infected, will they be more sick than other people?

We don’t currently know if pregnant women have a greater chance of getting sick from COVID-19 than the general public nor whether they are more likely to have serious illness as a result. Pregnant women experience changes in their bodies that may increase their risk of some infections. With viruses from the same family as COVID-19 and other viral respiratory infections, such as influenza, women have had a higher risk of developing severe illness. It is always important for pregnant women to protect themselves from illnesses.

How can pregnant women protect themselves from getting COVID-19?

Pregnant women should do the same things as the general public to avoid infection. You can help stop the spread of COVID-19 by taking these actions:
- Cover your cough (using your elbow is a good technique)
- Practice social distancing and keep six feet between you and others.
- Avoid people who are sick
- Clean your hands often using soap and water or alcohol-based hand sanitizer

Can COVID-19 cause problems for a pregnancy?

We do not know at this time if COVID-19 would cause problems during pregnancy or affect the health of the baby after birth.

Can COVID-19 be passed from a pregnant woman to the fetus or newborn?

We still do not know if a pregnant woman with COVID-19 can pass the virus that causes COVID-19 to her fetus or baby during pregnancy or delivery. No infants born to mothers with COVID-19 have tested positive for the COVID-19 virus. In these cases, which are a small number, the virus was not found in samples of amniotic fluid or breastmilk.

If a pregnant woman has COVID-19 during pregnancy, will it hurt the baby?

We do not know at this time what if any risk is posed to infants of a pregnant woman who has COVID-19. There have been a small number of reported problems with pregnancy or delivery, including preterm birth in babies born to mothers who tested positive for COVID-19 during their pregnancy. It’s not clear that these outcomes were related to maternal infection.
What should I do if I have symptoms of coronavirus?
If you experience fever, cough or shortness of breath, call your primary care physician to make an appointment to be seen. If you are unsure about your symptoms, you can call Tidelands Health Women’s Center any time at 843-546-3132.

What do I do if I go into labor?
Labor and delivery services at Tidelands Georgetown Memorial Hospital have been temporarily relocated to Tidelands Waccamaw Community Hospital. Planned, non-emergency deliveries will occur at Tidelands Waccamaw. Emergency labor and delivery services will continue to be provided at Tidelands Georgetown.

What entrance should I use when I get to the hospital?
Some public entrances are temporarily closed. Please use the main entrance or emergency department entrance at Tidelands Waccamaw Community Hospital and the emergency department entrance at Tidelands Georgetown Memorial Hospital. We have maps available to guide you; please ask for one if needed.

Are visitors allowed in the hospital after my delivery?
With the confirmation of COVID-19 cases in our region, we are increasing visitor restrictions at our hospitals. You may have one adult visitor in the hospital building at a time. This should be a visitor who helps with your care, not a social visitor. If “switching out,” the next visitor should wait in the parking lot – not inside the hospital. No one under age 18 or over age 69 may visit. All approved visitors will be screened for coronavirus symptoms and have their temperature taken.

Where do I go for a fetal non-stress test?
This service is provided at both Tidelands Health Women’s Center locations:
Tidelands Health Women’s Center at Georgetown
Tidelands Georgetown Memorial Hospital, third floor Suite 300
606 Black River Road, Georgetown
Phone: 843-546-3132

Tidelands Health Women’s Center at Holmestown Road
